

Gypsum Board Belt Services

Complete Wallboard Conveyor Service & Repair

- ✓ Installation
- ✓ Vulcanized Splicing
- ✓ Precision Sanding
- ✓ Preventative Maintenance

Superior Quality

DAVIS INDUSTRIAL is the premier gypsum wallboard forming belt service company. Offering installation, vulcanizing, preventative maintenance and belt repairs.

We understand the importance of creating a perfect splice the first time. One imperfection can mark the whole board and render the belt inoperable. Our specialized equipment sands the surface of an existing board belt to remove imperfections up to 1/16" deep in the cover surface to achieve greater wear life.

This process is very effective and has been performed at many of the major wallboard manufacturer's facilities by DAVIS INDUSTRIAL throughout the U.S.

We are available 24/7 for emergency situations.
