

AUTO LUBRICATION SYSTEMS

Auto lubrication systems are designed to provide a more reliable, efficient and safer way to lubricate machine bearings, parts and systems. This can be achieved by either a single greaser or centralizing all of the grease points into one. With automation the amount of time needed to properly maintain a piece of equipment or system is greatly reduced along with downtime due to bearing related failures. Worker safety is immensely improved by virtually eliminating the need to remove safety guarding, or to crawl into a piece of equipment to access those hard-to-reach grease points. All of the grease points are lubricated by one safe and easily accessible location outside of the safety guarding.

BENEFITS

- Lengthens life of bearings and conveyor components
- Dispensing rate not affected by temperature
- Simple setup and setting adjustments
- Broad range of settings to suit maintenance cycles. 1 -12 month cycles.

INDUSTRIES

CONSTRUCTION

- Excavators
- Articulated Trucks
- Cranes
- Wheel Loaders
- Motor Graders
- Scrapers

TRANSPORTATION

- Semi Trucks
- Cement Trucks
- Haul Trucks
- Waste Trucks
- Trailers
- Dump Trucks

AGRICULTURE

- Combines
- Balers
- Pickers
- Sprayers
- Tractors

INDUSTRIAL

- Presses
- Crushers
- Compactors
- Conveyors
- Mills
- Fans
